Tim's Electric Wheelbarrow

Tim's Electric Wheelbarrow, is a powerful and user-friendly alternative to a traditional wheelbarrow. Its 350W electric motor propels users forward with minimal effort, even on inclines or difficult terrain. With a compatible battery platform, you can simply use your existing batteries, eliminating the need for extra chargers. Despite being electric, it can handle tough jobs, travelling up to 2.5km on a single charge even in challenging conditions.

Designed for convenience, it boasts a user-friendly build and a simple electric motor under the tub for protection. The motor requires minimal maintenance, just occasional lubrication and chain tightening. An even bigger advantage is the transferability of the entire drive mechanism to a new wheelbarrow when needed, making it a long-lasting investment. Say goodbye to sweat and backbreaking work – electric wheelbarrows are the future of effortless hauling.

Specifications:

Capacity	100L
Tub Dimensions	880 x 600 x 265mm
Motor	350W
Battery	Not Included
